No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

GENERAL INFORMATION:
APPLICANT: BEASLEY,
TITLS OF INVENTION:

BEASLEY, Ellen

ISOLATED HUMAN PHOSPHOLIPASE PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUMAN PHOSPHOLIPASE

SOFTWARE:

LENGIH: 16063

CURRENT APPLICATION NUMBER: US/09/801,052 CURRENT FILING DATE: 2001-03-08 NUMBER OF SEQ ID NOS: 5

FastSEQ for Windows Version 4.0

FILE REFERENCE: TITLE OF INVENTION:

CL001045

PROTEINS, AND USES THEREOF

Sequence 3, Application US/09801052 Patent No. 6368842

/mote="Organ: Eye; Vector: pcMVSPRT6; Two different donor eyes (T5-80 years old) yielded approximately 600 mg of dissected RPB/choroid tissue. This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pcWVSPDRT6 vector was constructed at Life Technologies (Rockville, MD; now part of Invitrogen CDP), essentially following the protocols of the SuperScript plasmid System (Invitrogen COTP).
chttp://www.invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the NotI/Mul sites of the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /tissue_type="RPE/choroid"

                                                                                                                                                                                                                                                  /clone lib="Human Retinal pigment epithelium/choroid cDNA (Un-normalized, unamplified): cs"
/mote="Organ: Eye; Vector: pcMVSPORT6; Two different donor eyes (75-80 years old) yielded approximately 600 mg of dissected RPE/choroid tissue. This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pcMVSPORT6 vector was constructed at Life Technologies (Rockville, MD; now part of Invitrogen Corp), essentially following the protocols of the SuperScript plasmid System (Invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the Notl/Mul sites of the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cDNA Library Preparation: Life Technologies, Inc.
cDNA Library Arrayed by: Greg Lennon, Ph.D.
DNA Sequencing by: Washington University Genome Sequencing Center
Clone distribution: NCI-CGAP clone distribution information can be
found through the I.M.A.G.E. Consortium/LLNL at:
www-bio.llnl.gov/bbrp/image/image.html
Seq primer: -40UP from Gibco
High quality sequence stop: 395.
AGENCOURT_8484953 NIH_MGC_113
